The certified instructor of Leica Microscope Enhanced Dentistry

The speaker of Zeiss dental microscope training center

Invisalign invisible aligner system certification

DSD Master certification of Coachman DSD team

Asia Pacific Academy of Implant Dentistry (APAID) -
Diplomate of Oral Implantology

Taiwan Academy of Osseointegration (TAOI), Director

Summary

“Start with the end in mind” is the key concept of modern dental aesthetic treatment. To achieve this goal, Digital Smile Design (DSD) is the most efficient and easiest-to-follow treatment tool for clinical dentists. However, There is often a huge distance between the plans and reality in our clinical practice. What we face is often not just a simple issue of anterior tooth aesthetics, but a variety of interdisciplinary issues that are interlocked. We must combine several treatment plans from each dental specialist to complete aesthetic treatment simultaneously or sequentially while solving these problems. In this report, I will show you the aesthetic or interdisciplinary treatment possibilities with more advanced DSD tools.
