Chairman - Big Apple Dental Clinic, Tainan, Taiwan

Visiting staff in Orthodontics - Taipei Smile Dental Clinic, Taipei, Taiwan

Summary

Nowadays, orthodontic treatment for adults has been the faster growing area in dental practice. Adult patients are seeking treatment in order to improve their facial aesthetics and to have tooth repositioning, making restoration or replacement of teeth easier.

Furthermore, adult patients with temporomandibular disorder will also seek for orthodontic treatment for symptom relief as well as improvement of facial harmony. In this presentation, a novel approach of correcting Class II retrognathism without surgery nor miniscrews will be discussed.
