Title of Lecture

Using Bonded Porcelain Restoration to save tooth in Posterior Dentition

2006-2011 D.D.S - Taipei Medical University

Certified specialist in Aesthetic Dentistry - Taiwan Academy of Aesthetic Dentistry

Zeiss Speaker, Taiwan

Kavo dental speaker

Ivoclar Vivadent lecturer

Founder of 老施好BPR in posterior dentition form A to Z

Summary

In our day-to-day clinical work, we frequently encounter caries, with secondary caries often presenting as extensive and deep below the gingival margin. Faced with such scenarios, our approach, aimed at conserving the tooth structure, ensuring structural strength, and maintaining periodontal health, leans towards using bonded porcelain to restore the tooth. Our goal is to prolong the lifespan of the natural tooth.

The success and durability of BPR treatment rely on bonding and correct cavity design. In this case, I demonstrate how to tackle and streamline complex procedures even in challenging isolation conditions. We focus on optimal moisture control without extending clinical time, eventually completing the VPT (Vital pulp therapy) & BPR step by step.
